

Trendzy.

Team:

- Abdullah Bajkhaif
- Alex Markley
- Firas Al-Mahrouky
- Jay Maxwell
- Mohamed Al-Rasbi

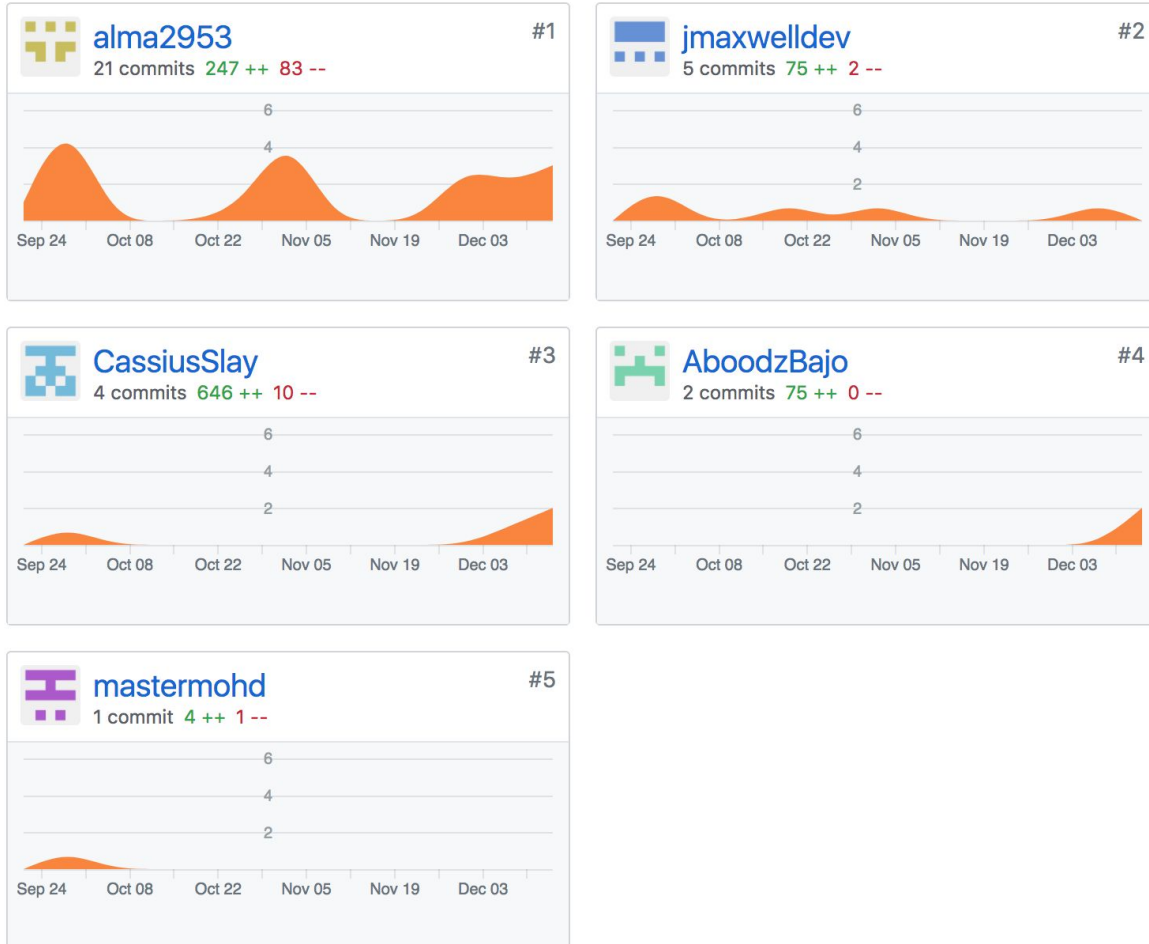

Project Tracker

Trello - <https://trello.com/b/yU9O2gij/completed>

VCS Repository

GitHub - <https://github.com/alma2953/Trendzy>

*Note:

There are about 33 commits from System Administrator:

- 19 commits from Mohamed Al-Rasbi
- 14 commits from Jay Maxwell

How to run the app

1. Clone the github repository to your localhost directory.

2. If you use Chrome, add this extension and enable it:
<https://chrome.google.com/webstore/detail/allow-control-allow-origi/nlfbmbojpeacfghkpbjhdihlkkiljbi?hl=en>.
3. Start the app by running the file site.php from localhost.

***Note:**

We host the database in Amazon AWS service. You should have internet access when you run the app.

Repo organization/structure

In Trendzy directory:

- public and includes directories contain database/login/signup files.
- tests directory has the tests we did in Milestone 5
- site.php, twitter.php and all other files related to the map, search bar and favorite features.
